A complete cylinder lock requires

1. Lockcase - right or left hand
2. Cylinder – on the external and/or internal
3. Accessories – cylinder ring for the external
4. Accessories – thumb turn for the internal
5. Striking plate – standard or security

Right hand to left hand or vice versa!

Before installing the lock in the door, check if the latch must be turned to suit door handing.

A. For 50mm backset remove screws fixing faceplate to the lock case.
   If a 70mm backset, remove screws fixing 20mm extension piece to lock case.
B. Pull faceplate away from lock case.
C. Latch bolt can now be turned around. If the lock case has an anti-thrust bolt ensure the hand is adjusted to that of the latch bolt.
D. Refit faceplate with fixings.

Position of the lock case (can be centrally or non-centrally positioned)
UK standard = centrally positioned

IMPORTANT: ASSA RECOMMENDS A CLEARANCE OF 3 MM BETWEEN DOOR AND FRAME.

1. Make sure that the arrows in the cylinder follower is pointing downwards on both sides of the lock case.
2. Fit the cylinder from the inside of the door with the four enclosed security screws.
3. Block and secure the security screws with the enclosed butterfly shaped security plugs. Turn the key to "1300 hours" and fit one security plug to secure the right pair, then turn the key to "0930 hours" and secure the left screw with the remaining security plug.
4. Slide the remaining cylinder sleeve onto the inside cylinder.
5. Fit the inside- and outside rings and fasten the screw.
Fixing instructions

**MODULAR LOCK**

**Top!**

**Template**

Note
Lockcase should be snug fit in mortice. Do not force!
